Cover design by Lisa Emmerich, and Eugene Emmerich.

Cover photo by NASA Jet Propulsion Laboratory, Pacman Nebula NGC 281 Constellation Cassiopeia.

Editing by Richard Carlson, and Clark Beck.

Special thanks to Peter Whelan in helping to launch this project with amazing insight and creativity.

Thanks to Max Anderson who I met at Dealey Plaza in Dallas Texas, as our paths crossed while in search of truth. His honesty in our time of lies and cover ups was the encouragement I needed to finish this book.

Other books by the author available on Amazon:

CSI Jerusalem: The Case of the Missing Body

The Resurrection-Rapture

Life or Death Publisher

# Clarification

There are four things of importance that must be clarified before anyone reads this fictional story.

They are;

1) The story is based on real events.

A-The research project STARGATE (America's Psychic Espionage Program) was an actual remote viewing research program started some time in the 70's and terminated in 1995. It was operated and funded by the United States military and CIA, although details differ as to who was actually in charge.

B-Director Dale Graff, Sergeant Melvin C. Riley, Major Ed Dames, Major General Dr. Albert Stubblebine, and Keith Harary, are real people who were involved with the Stargate Remote Viewing program. Keith Harary worked through the Stanford Research Institute.

C-The events described by our viewer are real prophetic events. They happen in the chronological order given by the author.

D-The event described from Rwanda is also an actual event to the smallest detail. Although it is represented as happening in 2012, it really happened 3-19-2008.

2) The prophetic dates are strictly fictitious and are used only to establish chronology. In no way am I setting dates for these events. Date setters in the past have been wrong 100% of the time. There is no way I want to try and go against those odds. The year mentioned as 2035 could just as easily be 2025 or 2125; nobody knows.

3) The story is based on real technology that exists today: BCI (Brain Computer Interface), Veri-chip RFID implant (Radio Frequency Identification Device), and Hyper-Electromagnetic propulsion. The story is also based on Einstein's theory on gravitational lensing ( $E=Mc^2$ ), which shows that space and time can be bent (warped).

4) I have taken the liberty of editing or paraphrasing the parts of scripture used in this story in an effort to condense and maintain flow of the passages. The scriptural locations are given so the reader can reference them and check for accuracy.

# Stealth Research Inc.

September 21, 2009. This day started like any other day. I was sitting outside enjoying a cup of coffee, and reading the newspaper. The weather was brisk but there was no wind and the warmth of the early morning sun felt great on my face. I'm not working right now because I am unemployed, and from what the newspaper is saying I'm not alone. The economy is in the tank and there aren't many employment opportunities anywhere. I was getting bored and was thinking about what I was going to do that day, when suddenly a black suburban pulled up and parked in front of my house. Three guys got out and started walking towards my front door. They looked like Elliot Ness and the Untouchables, or someone from Men in Black.

"Can I help you?" I yelled to them.

"Ya, we're looking for Gino DeMartini, is he here?"

"Who's asking?"

"I'm Hans Gruver, CEO of Stealth Research Inc."

"Who are your friends" I asked. "Dick Dastardly and Snidely Whiplash?"

"Are you Dr. DeMartini?"

"Yes I'm Gino. What can I help you with?"

The CEO replied, "Our company has received private funding to reopen the Stargate project that you were a part of in the 80's. We have chosen you to head up this project because of your extensive research on remote viewing. We know that you have been conducting experiments in precognition, clairvoyance, astral projection and ESP. We also know that you are unemployed and in foreclosure, so we are prepared to make you an attractive offer. Are you interested?"

I thought for a second and then responded, "What if I'm not?"

## *Stargate 2*

---

Mr. Gruver said, "You don't understand. I'm being polite. We're making you an offer you can't refuse. So we can do it the easy way or the hard way. You pick."

"OK, what's the easy way?"

"Stealth Research wants you to head up a project we're calling The Revelation Experiment. It's just a continuation of the Stargate project. You could call it Stargate 2. As you know, the reason for the Stargate termination was because of an inability to establish a controlled event. They knew remote viewing (seeing into the future) was possible but they weren't able to control it. But now because of recent technological developments we believe controlled viewing can be accomplished. We recently received information about your continued research and theories after speaking with the original Stargate director, Dale Graff. We want to see if your theories are possible. We are willing to supply all of the funding and resources you need, and in return we will get a negotiated right to a portion of the patents. Your job will be to hire and head up a team of experts to carry out this project. You will work with the granddaughter of Keith Harary, your colleague from the Stargate project. She has been continuing his research on remote viewing and should be very helpful. In return we will provide security for your family and make sure they don't have any untimely accidents. We will also stop the foreclosure on your home, and we are willing to pay you a six figure salary that will be determined next week. We're giving you one week to get everything in order and then we will expect results. You should work like your life depended on it. Have I made myself clear as to how this is going to work?"

“Yes” I replied, “but I’ll need at least a month to come up with a list of people for you to hire. I’ll also need you to build me a reactor similar to the Hardon collider for my Brain Computer Interface (BCI) experiments. It isn’t a cheap proposition, but without this reactor I won’t be able to implement the new technology that wasn’t available to us during the Stargate project in the 1980’s. Without this we’ll just be wasting each other’s time. Have I made myself clear?”

“Yes you have”, Hans replied. “We’ll discuss this in more detail when we meet next month. At that time we’ll go over all of the financial arrangements as well. Stealth Research is very serious about this project. Here’s my card. My contact information is on there and I’ll write the time and the address where we’ll meet on the back. See you in a month, and doctor, good luck.”

October 27, 2009. I went to the address on Mr. Gruver’s card, located in what’s known as the golden triangle of Silicon Valley. The site is in a research and development area where one building looks like the next. The only markings on the front of the buildings are street addresses, and that’s it. Our appointment is at 11:00 AM and I am right on time.

“Hi, I’m Dr. DeMartini and I have an appointment with Mr. Gruver at 11.”

“I’m glad you made it” the receptionist replied. “They’re waiting for you. Please follow the security officer, he’ll take you to the meeting room.” We went to an elevator and went down about four floors. I entered the meeting room and there sat Mr. Gruver and the two goons who were with him when he came to my home. There were also two other men I’d not met yet.

“Good morning Dr. DeMartini. Please say hello to Agent L and Agent XL. My other two colleagues, Dick and Snidely as you called them, you’ve met before. Do you have the list of personnel we talked about?”

“Yes, I do Hans. Here, I made you a copy.”

- Head of research, Gino DeMartini
- Research consultant, Angela Chen
- Research secretary, Mellisa Brower
- Professor of physics, Peter Whelan
- SPHEAR operator, Michael Peloquin
- Doctor of medicine, Vincent Bobarino
- RN, Katie Brower
- Engineer, Paul Sideris
- Architectural engineer, Johnny Tector
- BCI operator, Sandy Bean
- Remote viewer, Rex Bannon
- Head of security, Mark Rosiles
- Security, Frank Giovanni
- Construction and operations, Gio Contreras

“I can meet with my team and acquaint them with my research, but we won’t be able to start the experiments until the reactor you promised me is built. According to my chief engineer and my construction superintendent, that will take a minimum of 20 months.”

“Very well, Dr. DeMartini. You and your team can get started. You will be assigned the R&D floor, it’s labeled “Blue” when you get on the elevator. Security will escort you in and out of the building at all times. Make sure your team is here on Monday of next week at 6:00AM for background and security checks. Let them know this will take most of the day so come prepared. Now tell me about this reactor.”

“Sure, Hans. Basically it’s a globe, a sphere that accelerates subatomic particles on its inside surface by electromagnetic charge. Because of the centrifugal force that is generated we can accelerate these thought particles much faster than the speed of light. This allows us to bend time. Einstein’s theory on  $E=Mc^2$  shows that light mass, or radiation can be bent. He also theorized that the same thing can be done with time. Think of time as a chronological line. 2009 being point “A” and 2050 being point “B”. In theory, if you traveled fast enough you could be there in future time when an event happens. But that would be almost impossible to do. But if you could bend the line then you could eventually make a circle where point “A” and point “B” were in the same place..... in layman’s terms. This sphere would be connected to our Remote Viewer by means of a Brain Computer Interface software program (BCI). I’ll refer to the reactor as **S**ubatomic **P**article **H**yper **E**lectromagnetic **A**cceleration **R**eactor. SPHEAR. You know, it’s funny, I got the idea when I was on the superman ride at six flags in L.A.”

Agent L was taking notes like a machine gun. He and Hans talked for a moment and then Hans asked, “Does your engineer have structural and architectural drawings to submit to us for the building of this SPHEAR?”

“Yes, Hans. He’s almost done, but I’m sure there’ll need to be modifications made after a review is conducted, agreed?”

“Yes doctor, I concur. We’d like to build the project underground with access through the blue level. All mechanical, electrical, and plumbing will be housed in a single story structure above the project. Make sure your designer understands this.”

“Yes sir. Should be no problem.”

November 3 2009. “Well, looks like everyone made it. Nice to see you all. We’ll be starting background checks in a minute. If there’s anything I should know before we get started please come and speak with me now.” Half of the team informed me of their contractual obligations until next year. We worked out an agreement with Hans and XL to start the research part of our project in October 2010. In the meantime we will be comparing notes with each other. They will have to finish the construction before we can do any experiments. We all agreed there’s no need to create problems that don’t already exist by us being impatient.
